## EDUCATION

|                                                                                                                                                                                                                                                                                                                                                                                                                     |                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| <b>National University of Singapore</b><br><i>B.Comp. in Computer Science (NUS College), Minor in Mathematics</i><br>• <b>NUS Merit Scholarship</b> – awarded to high-calibre freshmen on academic results, leadership qualities and co-curricular record.                                                                                                                                                          | Aug 2026 — May 2029<br><i>Singapore</i> |
| <b>Singapore Polytechnic</b><br><i>Diploma in Applied AI and Analytics, CGPA: 4.0/4.0</i><br>• <b>Lee Kuan Yew Award for Mathematics &amp; Science</b> – top tech graduate, <b>IMDA Gold Medal</b> – top all-around achiever, <b>SP Scholarship</b> .<br>• Coursework: Deep Learning, Machine Learning, Reinforcement Learning, Full-Stack Development, DevOps, Data Analytics, Data Engineering and Visualisation. | Apr 2021 — Apr 2024<br><i>Singapore</i> |

## WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|
| <b>Technical Interviewer</b><br>Makeable.build<br>• San Francisco startup backed by Afore Capital, with \$250K in pre-seed funding.<br>• Designed and run the technical interview loop, assessing the engineering candidates the founders shortlist.                                                                                                                                                                                                                                                                                                                                                                                                         | Jul 2026 — Present<br><i>San Francisco, US (Remote)</i> |
| <b>AI Engineer (Volunteer)</b><br>Republic of Singapore Air Force, RAiD<br>• Built the full-stack system that analyses Air Traffic Control situations: an NVIDIA NeMo speech recognition and speaker diarisation layer (fine-tuned parakeet-tdt, canary-1b and NGPU-LM on H200 GPUs) feeding a Qwen3 reasoning layer served with vLLM.<br>• Deployed it to edge devices for real-time transcription in the control room; presented to the Chief of Air Force.<br>• Built an LLM-powered internal search tool at a RAiD hackathon hosted at Microsoft's office.                                                                                               | Oct 2023 — Jun 2026<br><i>Singapore</i>                 |
| <b>AI Intern</b><br>Bifrost AI<br>• Series A startup building synthetic data solutions for AI companies, backed by Sequoia Capital.<br>• Trained YOLOv6-lite for military tank detection with ST Engineering's Unmanned Vehicles Team; tuning for incremental learning lifted accuracy 16%+.<br>• Fine-tuned a StabilityAI VAE to improve text and high-frequency reconstruction for synthetic-to-real domain adaptation.<br>• Prototyped a zero-shot method with JinaCLIP to visualise missing data for NASA, BigBear AI and DSTA.                                                                                                                          | Apr 2024 — Jun 2024<br><i>Singapore</i>                 |
| <b>AI Engineer Intern</b><br>GovTech Singapore, Video Analytics, Data Science and AI Division<br>• Lead AI engineer on a computer vision pipeline for MSO's OneService App on AWS (EKS, SageMaker), classifying thousands of daily municipal reports via zero-shot ensembles.<br>• Built real-time animal welfare detection for NParks with OWLv2, tuned by Bayesian optimisation (Hyperopt); the pitch secured executive-board funding.<br>• Red-teamed GovTech's AI Image Detector with custom-trained LoRAs simulating locally contextualised deepfakes.<br>• Prototyped a novel feature-explainability method for object detection using SegGPT and SAM. | Apr 2023 — Mar 2024<br><i>Singapore</i>                 |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>Resumify</b> ( <a href="https://resumify.org">resumify.org</a> )<br>• Co-founder and AI Lead of a non-profit with YellowRibbon.gov.sg, HTX and the Singapore Prison Service; AI-powered resume services now delivered to 600+ users.<br>• Awarded SGD 24,000 in funding by the National Youth Council; signed a 12-month MOU with YellowRibbon; featured in The Business Times and Lianhe Zaobao.<br>• Collaborating with SPD (Society for the Physically Disabled); hosted a sharing session to train career facilitators on using the platform.<br>• Stack: Next.js, LLM agents, OpenAI API, ElevenLabs, Vercel, Render, Supabase, SQL. Developed with agentic tooling: OpenCode, Ralph loop, oh-my-openagent and Semble Search. | Nov 2023 — Present |
| <b>Air Traffic Control Automatic Speech Recognition (ATC-ASR)</b> ( <a href="https://huggingface.co/qenneth">huggingface.co/qenneth</a> )<br>• Fine-tuned parakeet-tdt-0.6b-v3 with NVIDIA NeMo to a state-of-the-art 5.99% Word Error Rate on the Jacktol ATC-ASR test split, trained in under an hour on a single H200; 200+ Hugging Face downloads a month at peak, now averaging 70.                                                                                                                                                                                                                                                                                                                                              | 2025               |
